Specification by technical data and detection area

B.E.G. Brück Electronic GmbH – a company with a tradition

Since 40 years, the family company founded in 1975 with its headquarters in Lindlar (near Cologne) stands for quality and innovation with customer satisfaction at its heart.

The foundation stone of the products within the comprehensive range was the development and production of emergency lights. Shortly thereafter, the production of emergency lighting systems followed.

B.E.G. was one of the first companies in Germany to commence the production of motion detectors and automatic lights in 1986. Since then, B.E.G. has produced several generations of motion detectors mainly for outdoor use on buildings that help increase security. The growth in automated systems for buildings and the resulting increase in the demand for intelligent control led to an expansion in B.E.G.'s range of daylight- and presence-dependent occupancy detection. The cost reduction through energy saving and the protection of the environment plus the additional comfort factor are strong arguments for the use of occupancy detectors.

In 2006, B.E.G. resumed responsibility for the handling of the sales of its entire production range of motion detectors, automatic lights, energy-saving floodlights, emergency lights and photoelectric switches from the previous sales partner with the aim of re-establishing close ties with its customers. The new purpose-built distribution and logistics centre with an attached production and development unit in Lindlar was commissioned in 2007.

In 2014, the new administration building has been built next to the distribution and production centre. Naturally, the new centre's building services are equipped with devices from the B.E.G. range: all rooms and passages are fitted with KNX occupancy detectors. For controlling DALI lights, occupancy detectors, blinds and light switches, the KNX Room Controller RCT, which is developed in-house, is used. The market for energy-efficient products, such as B.E.G.'s occupancy detectors, has been growing strongly for years. The new administration centre and its location next to the logistics centre offer the possibility to continue B.E.G.'s expansion.

In order to offer the customers a clear product structure, the product range has been divided into six product lines: LUXOMAT®, LUXOMATIC®, B.E.G. LUXOMAT®net, B.E.G. SMARTHOMER®, SAFETYLUX® and CHRONOLUX. They emphasise B.E.G.'s strengths: a broad product range, individual solutions, outstanding quality, and personal service. B.E.G. – The lighting control professionals.

Today, B.E.G. has an excellent reputation all over Germany and internationally with a steadily increasing number of offices and representatives in many countries around the world.

LUXOMAT® Motion detectors for exterior wall and ceiling mounting

- Simply better – for energy saving, security and convenience

Motion detectors with modern sensor technology

LUXOMAT® RC-plus next N and LC-plus 280 – these and other B.E.G. exterior motion detectors offer security and convenience in the areas that they cover. They can quickly and easily be adjusted to requirements on the spot: adjustment elements for mechanical range adaption and potentiometers for lux value (switch-on threshold) and follow-up time are located underneath the sensor head.

Blinds can be used to restrict the detection area so that only the desired area is covered. For example, they can be used to filter out a side road leading past the area. If requirements should change, settings can be altered according to demand.

For more convenience compared to a potentiometer, changes of settings and activation of additional functions can be made by the optional LUXOMAT® IR-RC or IR-LC-plus remote controllers. Changes can therefore be made without the inconvenience of climbing a ladder. Adjustments to changes in requirements can be accomplished with a few button presses.

Overview motion detectors for outdoor use

i PRODUCT INFORMATION

- Motion detector with 130° detection area and anti-creep zone
- Mechanical range adjustment
- Different follow-up time depending on direction of movement
- Adjustable ball head
- Easy mounting thanks to plug base
- Wall, ceiling and corner mounting
- Immediate operation using factory settings
- Additional functions can be set up using the optional remote control.
- Factory settings 3 min and 20 lux

▶ Wiring diagrams on page 163!

Blinds for B.E.G. motion detectors

- LUXOMAT® RC-plus next N (limitation of detection angle) – Part no. 32697

RC-plus next
with blinds

- LUXOMAT® LC-plus 280 – Part no. 32698

- 1 Anti-creep cover
- 2 Cover for near and remote zones
- 3 Remote zone cover

LC-plus 280
with blinds

- LUXOMAT® LC-Click-N – Part no. 32699 and LC-Mini – Part no. 33232

LC-Click-N
with blindsLC-Mini
with blinds

- Blinds allow the detection area of the sensor to be adapted to local conditions. Sources of interference or areas where monitoring is not required can thus be excluded from motion detection. Blinds are supplied in the packaging, and can also be ordered separately if more are needed.

Arc-extinction kit for B.E.G. motion detectors

- LUXOMAT® Arc-extinction kit – Part no. 10880

L 62 x W 39 x H 24 mm

- LUXOMAT® Mini-Arc extinction kit – Part no. 10882

L 50 x W 22 x H 10 mm

Installation instructions - RC suppressor:

- The RC suppressors supplied by B.E.G. provide any necessary suppression of interferences for your lighting installation. For technical reasons, voltage peaks when switching inductive loads (e.g. electronic ballasts), especially in combination with long cables, can lead to unexpected operation of ceiling or occupancy detectors.
- For large installations where many electronic ballasts are controlled in parallel, the use of RC suppressors is recommended. An efficient suppression of interferences is achieved when the RC suppressor is installed near the source of interference.

Wire basket B.E.G.

- LUXOMAT® Wire basket BSK – Part no. 92199

Ø 200 x 90 mm

For indoor use motion and occupancy
detectors

Ø 164 x 143 mm

For outdoor use motion detectors and for
PD4-TRIO-AP

LUXOMAT® Ceiling-mounted motion detectors for indoor use

- Intelligent control –
Light through motion

For optimum light measurement

Motion detectors are designed to detect moving sources of heat in their detection area reliably. Upon detected movement, they switch the light automatically according to the ambient light. When no more movement is detected, the detector switches the light off after pre-set follow-up time has expired.

This is achieved by means of passive infrared technology (PIR): the detection area of the motion detector is divided into many smaller subsections. Within these subsections, the detector measures any heat radi-

ation resulting, for example, from a creature. If there are temperature differences in several subsections caused by movement, these are detected by a sensor integrated in the detector. The sensor itself does not emit any radiation and is therefore called “passive”.

Reasonably switching the illumination significantly contributes to reduce power consumption. The light is only switched on when needed.

Switching with 1 or 2-channel motion detectors with simple light measurement

Overview of range in relation to mounting height

PD3N- and PD9 motion detector

Range (circular detection) T=18°C			
Mounting height	Smaller movements	Walking across	Walking towards
2.00 m	Ø=3.20 m	Ø=8.00 m	Ø=5.00 m
2.50 m	Ø=4.00 m	Ø=10.00 m	Ø=6.00 m
3.00 m	Ø=4.80 m	Ø=12.00 m	Ø=7.40 m
3.50 m	-	Ø=14.00 m	Ø=8.60 m
4.00 m	-	Ø=16.00 m	Ø=9.60 m
4.50 m	-	Ø=18.00 m	Ø=10.80 m
5.00 m	-	Ø=20.00 m	Ø=12.00 m

PD4N motion detector

Range (circular detection) T=18°C			
Mounting height	Smaller movements	Walking across	Walking towards
2.00 m	Ø=3.20 m	Ø=17.00 m	Ø=6.40 m
2.50 m	Ø=6.40 m	Ø=24.00 m	Ø=8.00 m
3.00 m	Ø=7.60 m	Ø=29.00 m	Ø=9.60 m
3.50 m	Ø=9.00 m	Ø=34.00 m	Ø=11.00 m
4.00 m	-	Ø=39.00 m	Ø=13.60 m
4.50 m	-	Ø=44.00 m	Ø=14.40 m
5.00 m	-	Ø=48.00 m	Ø=16.00 m

PD9-GH motion detector

Range (circular detection) T=18°C	
Mounting height	Walking across
5.00 m	Ø=3.00 m
6.00 m	Ø=3.50 m
7.00 m	Ø=4.20 m
8.00 m	Ø=4.80 m
9.00 m	Ø=6.00 m
10.00 m	Ø=6.00 m

Ø=diameter

Detector positioning

Maximum motion detection is achieved by walking across the detection area, not by walking towards it. This should be borne in mind when it comes to corridors.

Detector distance

In order to eliminate potential "dead zones", detection areas may overlap.

LUXOMAT® PD3N-1C

Walking across or towards

The range depends on size and speed of the object.

Description	Colour	Part Number
HF-H-MD1 Standard	white	94431

Blinds for B.E.G. occupancy and motion detectors

- LUXOMAT® PD3N-SM+FC+FM – Part no. 37367**

The blinds have nominal breaks at regular distance. The detection area can therefore be accurately adapted to your needs.

PD3N-SM
with blinds

- LUXOMAT® PD4-SM+FC+FM – Part no. 92313**

The blinds have nominal breaks at regular distance. The detection area can therefore be accurately adapted to your needs.

PD4-FM
with blinds

- LUXOMAT® Mini motion detector PD9 – Part no. 32702**

PD9-FC
with blinds

- LUXOMAT® Mini motion detector PD9-GH for large heights – Part no. 33207**

PD9-GH-FC
with blinds

- Blinds allow the detection area of the sensor to be adapted to local conditions. Sources of interference or areas where monitoring is not required can thus be excluded from motion detection. Blinds are supplied in the packaging, and can also be ordered separately if more are needed.

Arc-extinction kit for B.E.G. motion detectors

- LUXOMAT® Arc-extinction kit – Part no. 10880**

L 62 x W 39 x H 24 mm

- LUXOMAT® Mini-Arc extinction kit – Part no. 10882**

L 50 x W 22 x H 10 mm

Installation instructions - RC suppressor:

- The RC suppressors supplied by B.E.G. provide any necessary suppression of interferences for your lighting installation. For technical reasons, voltage peaks when switching inductive loads (e.g. electronic ballasts), especially in combination with long cables, can lead to unexpected operation of ceiling or occupancy detectors.
- For large installations where many electronic ballasts are controlled in parallel, the use of RC suppressors is recommended. An efficient suppression of interferences is achieved when the RC suppressor is installed near the source of interference.
- Wiring diagrams on page 158ff.!

Wire basket B.E.G.

- LUXOMAT® Wire basket BSK – Part no. 92199**

Ø 200 x 100 mm

For inside and outdoor use motion and occupancy detectors

- LUXOMAT® Wire basket BSK – Part no. 92467**

Ø 164 x 143 mm

For outdoor use motion detectors and for PD4-TRIO-SM

Modules for pre-wired ceiling-mounted motion detectors

COST COMPARISON [in %]

- Fast, safe, error-free installation
- Easy connection
- Can be easily reconnected in the event of subsequent changes to the application – flexibility now and in the future
- Cost-efficient:
 - » Up to 70% savings on labour costs
 - » Up to 30% savings on labour + materials

For additional information, please request our VBox catalogue

LUXOMAT® Occupancy detectors for interior ceiling and wall mounting

Motion detectors – occupancy detectors

Motion detectors used to be installed for exterior home illumination primarily for security.

In recent years, motion detectors have also been used inside buildings for occupancy detection. When used in this application they are known as occupancy detectors saving energy and offering more convenience.

Physically motion and occupancy detectors work on the same principle (infrared technology) in that they detect moving heat sources. They differ only in the technical parameters used.

Motion detectors switch the light depending on movements and the ambient light. Occupancy detectors regulate the artificial light in such a way that there is always a constant lux value in the room.

B.E.G. LUXOMAT® detectors have been developed to meet a variety of requirements. The PD2 for standard applications, the PD9 for discreet installation, the PD4 for increased range and many more. B.E.G. provides the best detector for every situation and can provide you with support in choosing the right one.

General

- Unlike motion detectors, occupancy detectors can also switch off lighting if there is sufficient daylight, because of their advanced mixed light measurement (the principle on which occupancy detectors are based).
- Do not install detectors near air-conditioning units or radiators.
- Ensure a suitable distance from lights, which also represent a heat source. Their temperature can influence the detector.

Master occupancy detector

- Master devices must not be connected in parallel – extend the detection area with cost-effective slave devices.
- Always position the master device as light controller at the darkest point in the room.

Master 2-channel occupancy detector

- Time delay of 5 min. for follow-up times > 15 min.
- In automatic mode, artificial light is switched off for energy saving when there is sufficient daylight.

DIM- and DALI occupancy detector

- The dimming version is a cost-effective and simple way to create a constant light control circuit – settings via remote control.
- With DIM devices, the mounting position is essential for the lighting level – the position must be such that only artificial light is detected which is controlled by the DIM detector itself.
- Two dimming channels dim and switch on lighting when people are present and when there is not enough light and switch it off when no people are present or there is enough light. Manual light dimming with common push button. Lighting control takes place independently.
- Settings can be made manually or by remote control for both channels together

DUO occupancy detector

- Common presence detection of people in both lighting areas. The detector's two directional light sensors simultaneously measure brightness in two different areas of the room independently of each other (e.g. areas near to and far from the window) and compare them with both pre-set brightness switching values.

TRIO occupancy detector

- In addition to the functionality of a DUO occupancy detector, TRIO occupancy detectors have a third output. This can optionally be used to control an additional lighting circuit (blackboard lighting) or to control HVAC units.

Corridor occupancy detector

- The increased range of 20 metres on each side can only be achieved in one axis which should be the same as the direction of the corridor. Important: The corridor window is essential for the mounting orientation of the corridor detector. If reattached wrongly, the optimal range cannot be achieved.
- For angles of $\pm 80^\circ$ to this axis, the standard PD4 range apply

PD9 occupancy detector

- The PD9 detector with extremely small sensor head and the detector's power supply have especially been developed for the use in lights and for being installed in suspended ceilings
- Because of the smaller size of the lens, the volumetric sensitivity of this occupancy detector is smaller than that of the PD2 to PD5 series since the PD9 has fewer lens segments.

PD11-FLAT occupancy detector

- The design occupancy detector PD11 is ultra-flat and elegant. With its visible mounting height of only 0.85 mm, it is almost invisible and fulfils high architectural demands.
- Within the successful LUXOMAT® family, it is the discreet solution for detection areas of up to \varnothing 9 m.
- It is available as master device having a high switching capacity of up to 2300W, as slave device, and also for KNX and DALI.

Overview of range in relation to mounting height

PD4 occupancy detector

Range (circular detection) T=18°C			
Mounting height	Seated activity	Walking across	Walking towards
2.00m	Ø=5.20m	Ø=17.00m	Ø=6.40m
2.50m	Ø=6.40m	Ø=24.00m	Ø=8.00m
3.00m	Ø=7.60m	Ø=29.00m	Ø=9.60m
3.50m	Ø=9.00m	Ø=34.00m	Ø=11.00m
4.00m	-	Ø=39.00m	Ø=13.60m
4.50m	-	Ø=44.00m	Ø=14.40m
5.00m	-	Ø=48.00m	Ø=16.00m
10.00m	-	Ø=48.00m	Ø=16.00m

PD11 occupancy detector

Range (circular detection) T=18°C			
Mounting height	Seated activity	Walking across	Walking towards
2.00m	Ø=2.40m	Ø=7.20m	Ø=4.80m
2.50m	Ø=3.00m	Ø=9.00m	Ø=6.00m
3.00m	Ø=3.60m	Ø=10.80m	Ø=7.20m
3.50m	Ø=4.20m	Ø=12.60m	Ø=8.40m
4.00m	Ø=4.80m	Ø=14.40m	Ø=9.60m
4.50m	Ø=5.40m	Ø=16.20m	Ø=10.80m
5.00m	Ø=6.00m	Ø=18.00m	Ø=12.00m

Ø=diameter

Detector positioning

Maximum motion detection is achieved by walking tangentially to the detector, not by walking frontally to the detector. This should be borne in mind especially when it comes to corridors.

Detector distance

In order to eliminate potential "dead zones", detection areas may overlap.

PD2-and PD9 occupancy detector

Range (circular detection) T=18°C			
Mounting height	Seated activity	Walking across	Walking towards
2.00m	Ø=3.20m	Ø=8.00m	Ø=5.00m
2.50m	Ø=4.00m	Ø=10.00m	Ø=6.00m
3.00m	Ø=4.80m	Ø=12.00m	Ø=7.40m
3.50m	-	Ø=14.00m	Ø=8.60m
4.00m	-	Ø=16.00m	Ø=9.60m
4.50m	-	Ø=18.00m	Ø=10.80m
5.00m	-	Ø=20.00m	Ø=12.00m

PD9-GH occupancy detector

Range (circular detection) T=18°C	
Mounting height	Walking across
5.00m	Ø=3.00m
6.00m	Ø=3.50m
7.00m	Ø=4.20m
8.00m	Ø=4.80m
9.00m	Ø=6.00m
10.00m	Ø=6.00m

PD4-M-1C-GH occupancy detector

Range (oval detection) T=17°C		
Mounting height	in longitudinal axis (L)	90° to longitudinal axis (B)
5.00m	Ø=26.00m	Ø=18.00m
6.00m	Ø=26.00m	Ø=18.00m
7.00m	Ø=28.00m	Ø=19.00m
8.00m	Ø=28.00m	Ø=19.00m
9.00-14.00m	Ø=30.00m	Ø=19.00m

LUXOMAT® PD4-M-1C-GH

SM

PRODUCT INFORMATION

- Occupancy detector designed for high-bay warehouses
- One potential-free (dry) contact
- Version as Master device
- Detection area can be extended with Slave devices
- Easy operation with remote control (required)
- Manual switching via push-button possible
- Factory settings 3 min and 1000 lux
- When used in high-bay warehouses, care should be taken that, in the cross-aisles of the warehouse, detectors are installed that can detect movement only in the desired aisle locations, by using blinds or other technical arrangements.**

- ▶ Wiring diagrams on page 163!
- ▶ Application example 19 for high-bay warehouses

The world's smallest KNX detector

PICO-KNX-DX-FC

Part no.: 92719

- Deluxe-Version of KNX-Generation 6 with numerous features
- Numerous setting options via the B.E.G. smartphone app
- Detection area: 360°
- Range: Ø 10 m
- Small, compact, unrivalled

LUXOMAT® PD11-M-1C-FLAT

FC

i PRODUCT INFORMATION

- Particularly flat occupancy detector as master version without additional power supply
- Visible portion when built into ceiling: H 0.85 mm
- One channel for light switching
- Simple operation with remote control (required)
- Version as Master device
- Detection area can be extended with Slave devices
- Spring clips for quick and easy installation in suspended ceilings

LUXOMAT® PD2N-M-1C-LED

FC

PRODUCT INFORMATION

- Remote control-capable occupancy detector for inside use with circular detection area
- Integrated LED lighting as separately adjustable orientation- and night light
- One channel for light switching
- Many adjustment and reading options via B.E.G. Smartphone-App
- Extension of the detection range possible by using up to 5 other PD2N-M-1C-LED
- Can be used as either Master device or Slave device

TECHNICAL DATA

- 110 - 240 V AC 50 / 60 Hz
- approx. 0.3 W, approx. 2 W with LED lighting
- 360°
- 2.5 m
- Ø 84 x 85 mm
- IP20 / Class II
- 20 °C to +40 °C
- PC, with sensor, power supply and LED light
- Channel 1**

LUXOMAT® PD4-M-2C-DUO

FC

PRODUCT INFORMATION

- Occupancy detector for two separate lighting groups
- One common detection area
- Two independent, movable light sensors
- Manual switching via two push-buttons possible
- Version as Master device
- Detection area can be extended with Slave devices
- Additional functions can be set up using the optional remote control.
- Factory settings 10 min and 500 lux

▶ Wiring diagrams on page 163!

LUXOMAT® PD4-M-2C-DS

FC

PRODUCT INFORMATION

- Occupancy detector connectable to two different phases
- 2 channels for switching light: the illumination system can be divided into two separate groups being electrically isolated.
- Version as Master device
- Extension of the detection area with one additional PD4-M-2C-DS-FC configured as a Slave device
- Manual switching possible via a common pushbutton
- Additional functions can be set up using the optional remote control.
- Factory settings 10 min and 500 lux

FC

PRODUCT INFORMATION

- Occupancy detector for switching loads connected to different phases
- Switching channels close if operating voltage fails, the illumination is kept on as long as both phases of the lights are supplied with power
- Designed for corridors
- Version as Master device
- Detection area can be extended with Slave devices
- Manual switching via two push-buttons possible
- Additional functions can be set up using the optional remote control.

LUXOMAT® PD4-M-3C-TRIO

PRODUCT INFORMATION

- Occupancy detector particularly for classrooms and training classrooms
- Two contacts, one of them dry, for two groups of light, separate switching possible
- One potential-free contact for blackboard illumination or HVAC
- One common detection area
- Two independent, movable light sensors
- Manual switching possible via two or three pushbuttons
- Version as Master device
- Detection area can be extended with Slave devices
- Additional functions can be set up using the optional remote control.

LUXOMAT® PD4-M-DUO-DIM

PRODUCT INFORMATION

- Occupancy detector for two separate lighting groups, for daylight-dependent lighting control
- Two 1-10 V interfaces for control of dimmable electronic ballasts
- One common detection area
- Two independent, movable light sensors
- Manual switching and dimming via push button possible
- Orientation light function
- Version as Master device
- Detection area can be extended with Slave devices
- Additional functions can be set up using the optional remote control.

TECHNICAL DATA

- 110 - 240 V AC 50 / 60 Hz
- approx. 0.5 W
- 360°
- 2.5 m
- SM= Ø 106 x 95 mm
- FC= Ø 97 x 103 mm
- FM= Ø 97 x 84 mm
- FC= IP20 SM= IP44 FM= IP20 / Class II
- 25 °C to +50 °C
- Polycarbonate, UV-resistant
- Channel 1 and Channel 2 (lighting control)**
- 2300 W, $\cos \varphi = 1$
- 1150 VA, $\cos \varphi = 0.5$
- max. inrush current I_p (20ms) = 165 A
- μ contact, NO contact with tungsten pre-make contact
- 2 dim outputs 1-10 V DC, up to 25 EB each channel
- 1 min - 30 min
- 10 - 2000 Lux
- Mixed light measuring

- Walking across
- Walking towards
- Smaller movements

LUXOMAT® PD4-M-DAA4G

FC

PRODUCT INFORMATION

- Flexible compact DALI solution designed for conference rooms, training rooms and classrooms
- High-sensitivity occupancy detector with the capability to address up to 64 DALI electronic ballasts (ECG) automatically, with segmented control via 4 groups
- Quick commissioning and maintenance processes with smartphone/tablet app (Android, iOS) - PC tool not required
- 3 lighting zones:
A for main lighting with segmented constant light regulation via 3 DALI groups and offset control,
B for lectern or blackboard lighting via separate DALI group,
C for lectern or blackboard lighting by integrated relay
- High performance switching relay with various operating modes, e.g. cutoff function for DALI ECG, HVAC, blackboard lighting etc.
- Manual switching and dimming available with conventional push buttons
- Detection area can be extended with up to four Slave devices of type PD4-S-DAA4G
- Full range of functions can only be activated with the B.E.G. IR-Adapter and a smartphone or tablet (Android, iOS)

TECHNICAL DATA

- 110 - 240 V AC 50 / 60 Hz
- approx. 0,4 W
- 360°
- 2.5 m
- FC= Ø 117 x 100 mm
- SM= Ø 124 x 85 mm
- IP20 / Class II
- 25 °C to +50 °C
- Polycarbonate, UV-resistant
- DALI Control:**
 - 1 - 64 DALI-EB max. 150 mA
 - 1 min - 150 min (Light zones)
 - 10 % - 30 % / OFF / 5 min - 60 min / ∞
 - 10 - 2000 Lux
- Relais (dry NO):**
 - 2300 W, cos φ = 1
 - 1150 VA, cos φ = 0.5
 - 5 min - 120 min (HVAC)
- Mixed light measuring

- Walking across
- Walking towards
- Smaller movements

LUXOMAT® Indoor 140-L

UK version

PRODUCT INFORMATION

- Wall-mounted occupancy detector with integrated pushbutton
- One channel for switching light (selectively main light or orientation light)
- Integrated downlight with the function of an orientation or a night light
- Extension of the detection range possible by using up to 5 other Indoor 140-L
- Can be used as either Master device or Slave device
- Please order coverings for EU version separately; available in various colours
- With centre plate suitable for all current flush-mount switch programs
- B.E.G. frame and centre plate for combination with all other frame systems, see page 110

TECHNICAL DATA

- ⚡ 110 - 240 V AC 50 / 60 Hz
- ⏻ approx. 0.4 W, approx. 0.8 W with night light
- 📐 120°
- 📏 1.1 m
- 📏 EU version: 88 x 88 x 52 mm

The world's smallest DALI detector

PICO-DALISYS-FC

Part no.: 93909

- Mini DALI multisensor (installation depth: 11mm)
- Seamless integration in B.E.G. LUXOMAT® net DALISYS
- Detection area: 360°
- Range: Ø 10 m
- Typical applications: Offices, conference rooms, schools, nursery schools, hospitals

LUXOMAT® PD11-S

FC

i PRODUCT INFORMATION

- Super flat Slave device for connection to Master device
- For extending the detection area of a Master device
- Trigger pulse to master device upon detected movement independent of the ambient light level
- Spring clips for quick and easy installation in suspended ceilings
- Compatible with all Master devices except: PD4-M-DS-FC, 11-48V units, PD9-M-SDB, PD4-M-DAA4G, Indoor 140-L, PD2N-M-1C-LED

Cover for B.E.G. occupancy and motion detectors

• LUXOMAT® PD2-SM+FM – Part no. 92260

The blinds have nominal breaks at regular distance. The detection area can therefore be accurately adapted to your needs.

PD2-SM

PD2-SM
with blind

• LUXOMAT® PD2-FC – Part no. 36635

The blinds have nominal breaks at regular distance. The detection area can therefore be accurately adapted to your needs.

PD2-FC

PD2-FC
with blind

• LUXOMAT® PD3N – Part no. 37367

The blinds have nominal breaks at regular distance. The detection area can therefore be accurately adapted to your needs.

PD3N-SM

PD3N-SM
with blind

• LUXOMAT® PD4 – Part no. 92313

The blinds have nominal breaks at regular distance. The detection area can therefore be accurately adapted to your needs.

PD4-FM

PD4-FM
with blinds

• LUXOMAT® Mini motion detector PD9 – Part no. 32702

PD9-FC

PD9-FC
with blind

• LUXOMAT® Mini motion detector PD9-GH for large heights – Part no. 33207

PD9-GH-FC

PD9-GH-FC
with blind

• LUXOMAT® PD11-FC – Part no. 38522

PD11-FC

PD11-FC
with blind

- Blinds allow the detection area of the sensor to be adapted to local conditions. Sources of interference or areas where monitoring is not required can thus be excluded from motion detection. Blinds are supplied in the packaging, and can also be ordered separately if more are needed.

Arc-extinction kit for B.E.G. motion detectors

• LUXOMAT® Arc-extinction kit – Part no. 10880

L 62 x W 39 x H 24 mm

• LUXOMAT® Mini-Arc extinction kit – Part no. 10882

L 50 x W 22 x H 10 mm

Installation instructions - RC suppressor:

- The RC suppressors supplied by B.E.G. provide any necessary suppression of interferences for your lighting installation. For technical reasons, voltage peaks when switching inductive loads (e.g. electronic ballasts), especially in combination with long cables, can lead to unexpected operation of ceiling or occupancy detectors.
- For large installations where many electronic ballasts are controlled in parallel, the use of RC suppressors is recommended. An efficient suppression of interferences is achieved when the RC suppressor is installed near the source of interference.

Blinds for B.E.G. wall switches

- LUXOMAT® Indoor 180 – Part no. 33233

- to mask detection below the mounting height (to prevent small animals from being detected)

Indoor 180
with blinds

- LUXOMAT® Indoor 180 – Part no. 92294

- for adapting the detection area of the sensor to local conditions by masking the lens partially

Protection against vandalism for Indoor 180

- LUXOMAT® Protection against vandalism – Part no. 92018

- Protection of the potentiometer cap against unwanted removing

- Blinds allow the detection area of the detector to be adapted to local conditions. Sources of interference or areas where monitoring is not required can thus be excluded from motion detection. Blinds are supplied in the packaging, and can also be ordered separately if more are needed.

Arc-extinction kit for B.E.G. motion detectors

- LUXOMAT® Arc-extinction kit – Part no. 10880

L 62 x W 39 x H 24 mm

- LUXOMAT® Mini-Arc extinction kit – Part no. 10882

L 50 x W 22 x H 10 mm

Installation instructions - RC suppressor:

- The RC suppressors supplied by B.E.G. provide any necessary suppression of interferences for your lighting installation. For technical reasons, voltage peaks when switching inductive loads (e.g. electronic ballasts), especially in combination with long cables, can lead to unexpected operation of ceiling or occupancy detectors.
- For large installations where many electronic ballasts are controlled in parallel, the use of RC suppressors is recommended. An efficient suppression of interferences is achieved when the RC suppressor is installed near the source of interference.

INDOOR 140-L – Flush mount, IP20

The Indoor 140-L (UK version) includes the frame. The Indoor 140-L (EU version) can also be ordered as sensor insert without frame.

- In order to fulfill higher hygiene requirements a washable cover is available as accessory. It offers the possibility to wash the Indoor 140-L in order to remove viruses and bacteria, for example.

INDOOR 180 – Flush mount, IP20

The Indoor 180 can either be ordered with a pre-mounted frame in B.E.G. design or without frame. For the sensor inserts without frame, we offer frames for self-mounting in 5 different colours. Please note that the pre-mounted frames have other inner dimensions than the frames for self-mounting. Enclosed to the detectors with pre-mounted frame are additional frames having inner dimensions of 50x50 mm.

LUXOMAT[®]net occupancy detectors and multisensors**Networkable products**

Bus system components are not connected via the normal 230 V wiring, but use wiring set up specially for their use (a bus), which supplies all system components with power, and carries sensor signals.

Applications for B.E.G. bus systems range from simple home automation all the way to control of entire building complexes. Configuration of the installation can be perfectly coordinated to the intended use, and retrospective changes are easy to implement.

The KNX and DALI bus systems support international standards, which means they can be extended practically however may be required. The broad range available gives installers the freedom to respond to all requests.

In both the KNX and DALI sectors, B.E.G. offers a wide selection of components, which combine in perfect harmony to create large building automation systems.

Variety of KNX products for every requirement

The KNX world offers users so many options for intelligent networking that the choice of the right occupancy detector can no longer be made solely on the basis of detection range. Depending on mounting location, more or less functionality is required in software.

To classify different use cases, the B.E.G. KNX occupancy and motion detectors from Generation 6 onwards are divided into three variants with differing ranges of functionality.

Basic – inexpensive solution for simple requirements

Standard – comprehensive solution for common requirements

Deluxe – premium solution for demanding requirements

LUXOMAT®net PD4N-KNX-DX

FC

i PRODUCT INFORMATION

- KNX occupancy detector with integrated KNX bus connector
- Individual adaption of detection sensitivity for each PIR sensor
- PIR sensors can be deactivated individually
- Direction of movement can be identified
- Adaption of dimming curve
- Mixed light measurement with internal and external light sensor
- Calculation of the reflection factor, e.g. on a desk, with optional IR-LM Infrared luxmeter
- Regulation/switching of three light groups via offset (external influence possible)
- Short presence, self-adjusting follow-up time
- Two logic modules
- Recall of light scenes
- Sound and temperature sensor

■ TECHNICAL DATA

- Ⓢ 24 V DC via KNX BUS
- ⓐ 12 mA
- Ⓜ 360°
- Ⓢ 2.5 m
- Ⓜ FC= Ø 106 x 68 mm
- Ⓜ FM= Ø 106 x 55 mm
- IP IP20 / Class II
- Ⓢ 1 h to 100 h selectable
- Intelligent semi-automatic mode, occupancy-independent regulating mode (photoelectric detector), full automatic mode
- Ⓢ -5 °C to +45 °C
- Ⓢ Polycarbonate, UV-resistant
- Ⓢ 1 light output (for regulating or switching), 1x slave output, 3 separate HVAC outputs
- Ⓢ 10 % - 100 % / OFF / 1 min - 255 min
- Ⓢ 10 % - 100 %
- ☀ 5 - 2000 Lux

- ① Walking across
- ② Walking towards
- ③ Smaller movements

i PRODUCT INFORMATION

- KNX occupancy detector with integrated KNX bus connector
- Individual adaptation of the motion sensor sensitivity
- Mixed light measurement with internal light sensor
- full automatic mode
- One light output (switchable) and one separate HVAC output
- Various locking functions
- Status LEDs can be activated / deactivated
- For use with covering (interior cover dimensions 50x50mm) in 5 different colours
- With centre plate suitable for all current flush-mount switch programs
- B.E.G. frame and centre plate for combination with all other frame systems, see page 110

LUXOMAT[®]net Indoor 180-LON

FM

PRODUCT INFORMATION

- LON wall occupancy detector with integrated light sensor for daylight-dependent lighting regulation
- Full-automatic or semi-automatic operation mode
- The following device functions are provided as bus variables:
 - 1 x Light sensor
 - 1 x Occupancy sensor
 - 1 x Occupancy and light controller
 - 1 x Occupancy controller
 - 2 x Sunblind switch
 - 1 x Space comfort controller
 - 3 x push button function
 - 1 x Scene panel
- Switching or constant light control modes.
- Easy interface to HVAC systems
- FT5000 LON transceiver
- All configuration properties changeable via network variables
- IR-PD-LON user remote control (optional)
- Settings with the LON installation tool
- For use with covering (interior cover dimensions 50x50mm) in 5 different colours
- Configurable orientation light level and follow-up time when area is vacated
- B.E.G. frame and centre plate for combination with all other frame systems, see page 110

TECHNICAL DATA

- ⌚ 24 V DC +/- 20 % via LON BUS
- Ⓐ 12 mA at 24 V DC
20 mA at 24 V AC
- ⏻ < 0.5 W
- 📐 180°
- ⏏ 1.1 - 2.2 m
- ⚠ Attention, exceptional mounting height!
- 📏 87 x 87 x 61 mm
- 📦 IP20 / Class II
- 🌡 -5 °C to +50 °C
- 💡 Mixed light measuring

- ① Walking across
- ② Walking towards

IR-Adapter for Smartphones	black	92726

DALISYS – the bus system of the future

DALISYS

Responding to the forthcoming DALI2 standard, B.E.G. has developed DALISYS. Lighting, the core DALI area, can then be combined with other areas directly via the DALI bus. The bus does not have to be newly installed, as two free cores in the existing mains wiring can be used.

With a combination of control, lighting and system devices, DALISYS is almost infinitely scalable – everything from fitting out single rooms to lighting control for a complete building complex is possible.

The components are addressable and work on the principle of distributed intelligence, which means a high level of operational reliability can be achieved.

The system's flexibility can be seen on the three additional installation examples for different property sizes on the following pages.

The comfortable access to DALI

B.E.G. assists you in planning, commissioning and realising your DALISYS project:

- The B.E.G. planning department assists you in planning the perfect equipment for your project and advises you on the DALISYS functions and possibilities, e.g. the Guided Light function.
- The B.E.G. CAD department creates an interactive 2D floor plan of your project. Therefore, the client is provided with a visualisation of the lights, multisensors and push-buttons.
- B.E.G.'s DALI lighting control unit is a pre-wired enclosure comprising the components for up to four DALI lines. This enables a quick installation.
- B.E.G.'s DALI experts will be at your side with help all the way from the first drawing to commissioning to achieve our common goal: satisfied customers.

INFO:

Pre-wired DALI lighting control unit DLC4

Various DALISYS components are pre-mounted and pre-wired by B.E.G. in an enclosure. The installer only has to connect the input and output wires to the DALI bus, network and LAN and the enclosure is ready to use.

iOS + Android

15 years ago, B.E.G. was the first to offer a remote control-capable motion detector. Nowadays, almost all B.E.G. occupancy and motion detectors are remote control-capable. To make things easier, B.E.G. now offers the new remote control app.

What you need is a compatible Smartphone with internet connection and the B.E.G. LUXOMAT® remote control app, which is downloadable in the Google Play Store or the Apple Store. The update service ensures that the app is always up to date.

The app contains all current B.E.G. remote controls and therefore replaces more than 40 remote controls. The user-friendly navigation offers the possibility to search for the product to program or the respective remote control by name or part number. Therefore, the installer (or the user) quickly finds the right user interface.

The required B.E.G. IR-Adapter for Smartphones is simply plugged into the audio jack of the smartphone and establishes the communication with the respective detector. The battery is environmentally friendly thanks to being rechargeable and is charged via USB cable.

Saving energy through twilight-dependent light switching

■ Easy light switching with integrated automatic function

Automatically switching lights

Photoelectric switches are the right choice for all those places where lights need to be automatically switched on or off at the end or beginning of the day.

Light sensors measure the ambient light conditions and will switch the light on or off depending on the pre-set twilight value. Generally, lights are not needed at certain times of the day. B.E.G. products therefore allow the light to be controlled in relation to the twilight and are thus able to help save energy.

B.E.G. supplies photoelectric switches for a variety of purposes to this end: for profile rails, for installation in units and for wall or post installation as well as a remotely controlled product.

Saving energy with lights!

LUXOMAT® MiniClip LR1**i** **PRODUCT INFORMATION**

- MiniClip LR1 light sensor with mixed light measurement for constant light control, to be clipped on to the T5 and T8 fluorescent lamps
- It provides a direct current ranging from around 1 to 10 V DC proportionate to the measured light value which is used to govern electronically controllable electronic ballasts.
- Continuous dimming is used to implement constant light control for room lights that adapt to the amount of daylight.
- The light value to be kept constant in the room may be set by turning the knurled sensor cap.

**Top-quality products from B.E.G. –
quickly and easily installed**

Since more than 40 years our name represents excellent quality and reliable solutions. But B.E.G. quality goes far beyond perfect functioning and attractive design. Starting with our development department, we make high demands on our products.

Our developers do not make any compromises and attach a special value to a good quality of the materials and an innovative technology. They are always searching for optimum solutions and new user-friendly functions.

Our motion and occupancy detectors offer various switching variants. On the following pages you find wiring diagrams for all detectors named in this catalogue.

For any questions please do not hesitate to contact us. Our staff will be pleased to help you in finding and planning the right products.

Standard mode with 12-48 V DC-occupancy detector

Wiring diagram for

- PD4N-LTMS-RR-FC
- PD2N-LTMS-RR-FC

Standard mode with KNX-occupancy detector

Wiring diagram for

LUXOMAT® application examples for electricians and planners

With B.E.G. you can plan conveniently and safely

To find the right detector out of B.E.G.'s broad range is not always easy. B.E.G. as a specialist offers a lot of detectors with many special functions for almost every demand. It will be our pleasure to support you in finding the right detector.

The following pages offer tips to the optimum mounting location and the correct programming of our detectors as well as planning examples for different projects. This helps in finding the most adequate detector for the special demands of the location quickly.

Furthermore, profit from B.E.G.'s service and experience. Our field staff will be pleased to assist you.

In addition, our CAD specialists will assist you in planning the mounting location of the LUXOMAT® motion and occupancy detectors. Just send us your plans by email. The rest is up to us - free of charge, naturally.

You can rely on us: we will assist you until your project is finished.

- ① Walking across
- ② Walking towards
- ③ Seated / Smaller movements

The best position

- The area to be monitored must be completely covered by the detector's detection area. There are different ranges to be considered for "smaller movements", "walking towards the detector" and "walking across the detection area". If possible, the detector should always be mounted laterally to the direction of movement of people and vehicles.
- Ensure a clear view: glass, windows, room dividers, furniture, plants, hanging lights or installations limit the detector's detection area.
- Unwanted triggering of the detector can be caused by sources of interference in the detection area, such as trees, bushes, heaters that switch on and off, fans and all equipment that causes heat flows (however, radiators, computers, sunlit surfaces and ventilation systems are not sources of interference).
- Minimum distance to the light being controlled is 1 metre.
- The light being controlled must not be in the detector's detection range (for example lights underneath the detector), while indirect lights must not cast their light directly on the detector.
- If possible, follow recommended mounting heights of 2.5-3.0 metres (flush-mount wall switches 1.1-2.2 metres, high-bay detectors (for installation at height) up to 10 metres).

Correct connection

- No more than five units must be connected in parallel. As more detectors are connected in parallel, the detection area becomes larger and harder to manage, and more difficult to troubleshoot. If many motion detectors are connected in parallel, some connected loads may no longer switch off (this can normally be fixed by installing an arc extinction kit).
- Master occupancy detectors must not be connected in parallel. To extend the detection area, cost-effective slave devices are available (please see the corresponding wiring diagram).
- More extensive help is given in the wiring diagrams in the previous section

Correct settings

- **Switch-on threshold / Set value brightness**
 - Transit areas: 300 lux
 - Working areas (offices, living rooms etc.): 600 lux
 - Detailed or close-up activities: 1000 lux
 - Light evaluation should be deactivated for areas without daylight or for day/night mode ("sun" symbol)
- **Follow-up time for lighting control**
 - Transit areas: about 5 min.
 - Working areas: about 15 min.
 - Pulse operation (1 second) for control of automatic stair lights or building control systems
- **Follow-up time for device control**
 - Depending on type of connected load 5 - 120 min.
 - Pulse operation for control of building control systems
 - Alarm pulse to avoid incorrect connection

APPLICATION EXAMPLE 1: CORRIDOR WITH INDOOR 180 AND PD2

B.E.G.

■ Application description:

An automatic lighting control with wall switches as occupancy detector is to be implemented in an office-floor corridor. 4-lighting groups are to be formed and each is to be individually switched: The lobby to the staff elevators, a reception area and two separate corridor sectors.

■ Note:

Pay special attention to the access areas. To ensure "dead zones" are prevented in the corridor, increase the follow-up time if necessary. When the detectors are being directly (frontally) approached, it is critical that the range specifications specially indicated in the catalogue for "walking towards" be taken into consideration. Corridors can be ideally kept under surveillance with both the PD4 corridor detector as well as with the Indoor 180 wall switch.

■ Building information:

Type: corridor with daylight
Dimensions: L 40.00 x W 15.00m
Room height: 2.70m (in light)

■ Illumination:

Four separate lighting groups with electronic ballasts

■ Products shown:

4 each LUXOMAT® Indoor 180 Slave device
2 each LUXOMAT® Indoor 180 Master device
1 each LUXOMAT® PD2 Slave device
2 each LUXOMAT® PD2 Master device

■ Master settings PD2 / Indoor 180:

Follow-up time R1: > 5min.
Switch-on threshold R1: 300 Lux or individual using remote control
Follow-up time R2: optional

■ Connected circuit:

- Master operation in the reception area and in the lift antechamber
- Master/Slave switching in transit area
- The Master device must always be mounted at the point with the least proportion of daylight.

PD3N-1C-FC	white	20	92196
PD3N-1C-FM	white	20	92186

APPLICATION EXAMPLE 3: CORRIDOR WITH PD4-MASTER-2C-C (CORRIDOR) AND PD4-MASTER-2C

B.E.G.

■ Application description:

Corridor in an office level with three lighting groups: lobby to the passenger lifts (yellow), corridor area (red), staircase area (blue)

■ Note:

Pay special attention to the access areas to ensure "Dead zones" are prevented in the corridor. Increase the follow-up time if necessary.

When being directly (frontally) approached, it is critical to take the detector range specifications specially indicated in the catalogue into consideration for "walking towards", 10 m radius for the corridor occupancy detector. The large frontal sensitivity is available in the corridor axis only (180°). Across applies the sensitivity of the standard PD4.

■ Building information:

Type: corridor with daylight
Room height: 2.70 m

■ Illumination:

Three separate lighting groups with electronic ballasts

■ Products shown:

- 1 each LUXOMAT® PD4-Master-C (corridor occupancy detector)
- 2 each LUXOMAT® PD4-Slave-C (corridor slave device)
- 4 each LUXOMAT® PD4-MasterSM/FM/FC

■ PD4 device settings:

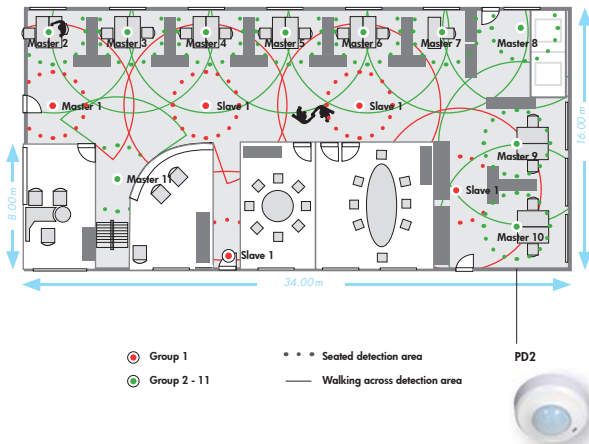

Follow-up time: approx. 5 min.
Switch-on threshold: 300 Lux

■ Connected circuit:

- Master/Slave operation in corridor area
- Standard operation in lift room and staircase area

APPLICATION EXAMPLE 4: OPEN-PLAN OFFICE WITH PD2

Application description:

Automatic lighting control with occupancy detectors is to be implemented in an open-plan office. The double and single workstations, the reception area, and the lobby to the passenger lifts are each switched individually. The transit area is to be entirely surveilled.

Building information:

Type: open-plan office with daylight
 Dimensions: L 34.00 x W 16.00m
 Room height: 2.70 m (in light)

Illumination:

Eleven separate lighting groups with electronic ballasts

Products shown:

4 each LUXOMAT® PD2 Slave device
 11 each LUXOMAT® PD2 Master device

PD2-Master device settings:

Follow-up time R1: 5 min.
 Switch-on threshold R1: 500 Lux or individual using remote control
 Follow-up time R2: optional

Connected circuit:

Master operation at workstations and in the reception area, Master/Slave switching in transit area. The Master device must always be mounted at the point with the least proportion of daylight.

APPLICATION EXAMPLE 5: STAIRCASE WITH PD3N

B.E.G.

- Group 1 - - - Walking towards detection area
- Group 2 ——— Walking across detection area

■ Application description:

The lighting in the staircase of a multi-family dwelling is to be automatically controlled with four motion detectors. The motion detector is to be mounted on the ceiling.

■ Building information:

Type: staircase with three residential floors with daylight and a basement level without daylight
Dimensions: L 7.00 x W 2.50m
Floor height: 2.70 m (in light)

■ Illumination:

One lighting group with electronic ballast

■ Products shown:

4 each LUXOMAT® PD3N

■ Device settings:

Follow-up time: 5 min.
Group 1: Switch-on threshold 300 Lux (with L' monitoring)
Group 2: Switch-on threshold day (sun symbol)

■ Connected circuit:

Parallel operation

■ Alternatives:

Typical example no. 6:

APPLICATION EXAMPLE 12: INDIVIDUAL OFFICE WITH PD3N-1C

■ Application description:

In an individual office, the lighting is to be controlled depending on presence and daylight. Even with the automatic control, it should be possible to manually influence the current switching status via push button or remote control. The motion detectors are to be mounted on the ceiling.

■ Building information:

Type: individual office with daylight
Dimensions: 4.00 x 5.00m

■ Illumination:

One lighting group with electronic ballast

■ Products shown:

1 each LUXOMAT® PD3N-1C-SM/FC/FM

■ Device settings:

Follow-up time R1: 10 min.
Switch-on threshold: 500 Lux or individual using remote control

■ Connected circuit:

Master operation with optional push button operated control

Description	Colour	Page	Part number
PD3N-1C-SM	white	20	92190
PD3N-1C-FC	white	20	92196
PD3N-1C-FM	white	20	92186

APPLICATION EXAMPLE 13: UNDERGROUND CAR PARK WITH PD4N-1C

B.E.G.

● Group 1

● Group 2

--- Walking towards detection area

— Walking across detection area

PD4N-1C

■ Application description:

In the underground car park, the best possible surveillance of the entrance area to the garage and the main transit area should be achieved with as few motion detectors as possible. Blind spots in certain partial areas of the garage are to be bridged with adapted follow-up timing. The lighting is to be divided into two separate lighting groups (gate and wall sides). The motion detectors are to be mounted exclusively on the ceiling.

■ Building information:

Type: underground car park without daylight
Dimensions: L 77.00 x W 35.00m
Room height: 3.00 m

■ Illumination:

Two separate lighting groups with electronic ballasts
Variation A) directly switched by the motion detector
Variation B) switched via external timer

■ Products shown:

6 each LUXOMAT® PD4N-1C

■ Device settings:

Variation A) Follow-up time: 8 min.,
Switch-on threshold: Day mode (light evaluation inactive)
("sun" symbol)
Variation B) Follow-up time: impulse,
Switch-on threshold: Day mode (light evaluation inactive)
("sun" symbol)

■ Connected circuit:

Parallel circuit per lighting group

■ Note:

Please ensure that the motion detector installation is always made lateral to the pedestrian and vehicle driving direction. If one walks directly towards the detector, the range is significantly reduced.

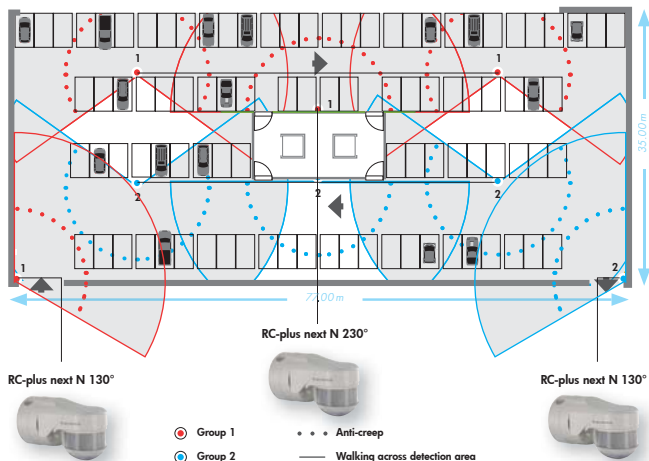

■ Alternatives:

Typical example no. 14:

Underground car park with LUXOMAT® RC-plus next N motion detector

PD4N-1C-FM	white	24	92151

APPLICATION EXAMPLE 14: UNDERGROUND CAR PARK WITH RC-PLUS NEXT N

■ Application description:

In the underground car park, the best possible surveillance of the entrance area to the garage and the main transit area should be achieved with as few motion detectors as possible. Blind spots in certain partial areas of the garage are to be bridged with adapted follow-up timing. The lighting is to be divided into two separate lighting groups (gate and wall sides). The motion detectors are to be mounted on the wall or on the ceiling.

■ Building information:

Type: underground car park without daylight
Dimensions: L 77.00 x W 35.00m
Room height: 3.00m

■ Illumination:

Two separate lighting groups with electronic ballasts
Variation A) directly switched by the motion detector
Variation B) switched via external timer

■ Products shown:

6 each LUXOMAT® RC-plus next N 230
2 each LUXOMAT® RC-plus next N 130

■ Device settings:

Variation A) Follow-up time: 8 min.,
Switch-on threshold: Day mode (light evaluation inactive)
("sun" symbol)
Variation B) Follow-up time: impulse,
Switch-on threshold: Day mode (light evaluation inactive)
("sun" symbol)

■ Connected circuit:

Parallel circuit per lighting group

■ Note:

Please ensure that the motion detector installation is always made lateral to the pedestrian and vehicle driving direction. If one walks directly toward the detector, the range is significantly reduced.

APPLICATION EXAMPLE 15: PRIVATE GARAGE WITH PD3N

B.E.G.

- Group 1
- Walking towards detection area
- Walking across detection area

■ Application description:

In a private garage, the lighting is to be controlled automatically with motion detectors.
The motion detectors are to be mounted on the ceiling.

■ Building information:

Type: private garage without daylight
Dimensions: L 5.00 x W 8.00m
Room height: 2.10m

■ Illumination:

One lighting group with electronic ballast

■ Products shown:

1 each LUXOMAT® PD3N-1C-SM/FC/FM

■ Device settings:

Follow-up time: 4 min.
Switch-on threshold: Day mode (light evaluation inactive) ("sun" symbol)

■ Connected circuit:

Standard operation

Description	Colour	Page	Part number

PD3N-1C-FC	white	20	92196
PD3N-1C-FM	white	20	92186

APPLICATION EXAMPLE 16: WASH ROOMS WITH INDOOR 180-R AND PD3N-MICRO

Application description:

Wash rooms with enclosed WC booths, wall installation of the motion/sound detector. Combined motion/sound detectors are used offering the possibility to also monitor blind spots, such as toilet booths, depending on noises.

Note:

The noise sensitivity should be pointed out to the toilet guests, e.g. using a poster inside the booths.

Building information:

Type: public toilet without daylight
Room height: 2.70 m

Illumination:

One lighting group with electronic ballast per room

Products shown:

2 each LUXOMAT® Indoor 180-R and 1 PD3N-Micro

Device settings:

Follow-up time: 10 min.

Switch-on threshold: Day mode (light evaluation inactive) ("sun" symbol)

Noise sensitivity: the optimum sensitivity is to be determined through tests

Connected circuit:

Standard operation with noise sensitivity

Alternatives:

Typical example no. 17: with LUXOMAT® PD3N

Description	Colour	Page	Part number
Indoor 180-R without frame	-	89	92665

APPLICATION EXAMPLE 17: WASH ROOMS WITH PD3N

B.E.G.

■ **Application description:**
Wash rooms with closed WC booths.
Ceiling installation of the motion detectors.

■ **Building information:**
Type: public toilet without daylight
Room height: 2.70m

■ **Illumination:**
One lighting group with electronic ballast per room

■ **Products shown:**
7 each LUXOMAT® PD3N-SM/FM/FC

■ **Device settings:**
Follow-up time: 10 min.
Switch-on threshold: Day mode (light evaluation inactive)
("sun" symbol)

■ **Connected circuit:**
Parallel operation per room

■ **Alternatives:**
Typical example no. 18; with LUXOMAT® Indoor 180-R and PD3N Micro

Description	Colour	Page	Part number

PD3N-1C-FC	white	20	92196
PD3N-1C-FM	white	20	92186

APPLICATION EXAMPLE 18: TRIPLE GYMNASIUM WITH PD4-MASTER

Application description:

Automatic lighting control with occupancy detectors is to be implemented in a triple gymnasium. One lighting group per hall area is to be formed and switched individually. Even with the automatic control, it should be possible to manually influence the current switching status via both push button and remote control.

Building information:

Type: gymnasium with daylight
Dimensions: L 40.00 x W 18.00m
Room height: 8.00 to 10.00 m (in light)

Illumination:

One lighting group with electronic ballast per hall section

Products shown:

3 each LUXOMAT® PD4-Master device

Device settings:

Follow-up time R1: > 5 min.
Switch-on threshold: 500 Lux or individual using remote control
Follow-up time R2: optional

Connected circuit:

Master operation for all three lighting groups;
Master/Slave operation is likewise possible.
The Master device must always be mounted at the point with the least proportion of daylight.

Description	Colour	Page	Part number
PD4-M2C-SM	white	55	92140
PD4-M2C-FC	white	55	92148
PD4-M2C-FM	white	55	92255

APPLICATION EXAMPLE 19: HIGH-BAY WAREHOUSE WITH PD4N-1C AND PD4-M-1C-GH

B.E.G.

■ Application description:

In a warehouse, the various sectors are to be monitored using motion and/or occupancy detectors and the lighting should be automatically switched. The warehouse is divided into the following sectors: 5 corridors (red), start-of corridor zone, end-of corridor zone (green), warehouse entrance, elevator sector, ramps (blue). Each sub-section is to be individually monitored and switched. The detectors are to be mounted on the ceiling.

■ Building information:

Type: high-bay warehouse with daylight
Dimensions: L 40.00 x W 37.00m
Room height: 10.00 m

■ Illumination:

Ten lighting groups with electronic ballast

■ Products shown:

3 each LUXOMAT® PD4N-1C-SM/FC/FM
7 each LUXOMAT® PD4-M-1C-GH-SM

■ Device settings:

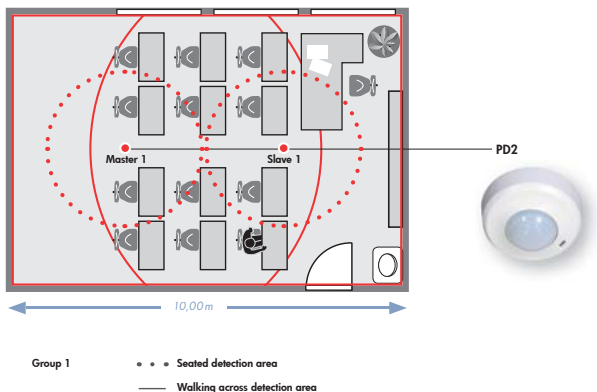

Follow-up time R1: > 5 min.
Switch-on threshold: 500 Lux or individual using remote control
Follow-up time R2: optional

■ Connected circuit:

Master operation for lighting groups 1 to 3, 9, 10
Master/slave operation for lighting groups 4 to 8

APPLICATION EXAMPLE 20: CLASS ROOM WITH PD2-MASTER-1C AND SLAVE

Application description:

In a classroom, the lighting is to be controlled depending on presence and daylight. Despite the automatic control, it should be made possible to manually influence the switching condition via push buttons or remote control. The occupancy detector is to be mounted on the ceiling.

Building information:

Type: classroom with daylight
Dimensions: L 10.00 x W 6.00m
Floor height: 2.70 m (in light)

Illumination:

One lighting group with electronic ballast

Products shown:

1 each LUXOMAT® PD2Slave device
1 each LUXOMAT® PD2-Master device

PD2-Master device settings:

Follow-up time R1: > 5 min.
Switch-on threshold R1: 500 Lux or individual using remote control
Follow-up time R2: optional

Connected circuit:

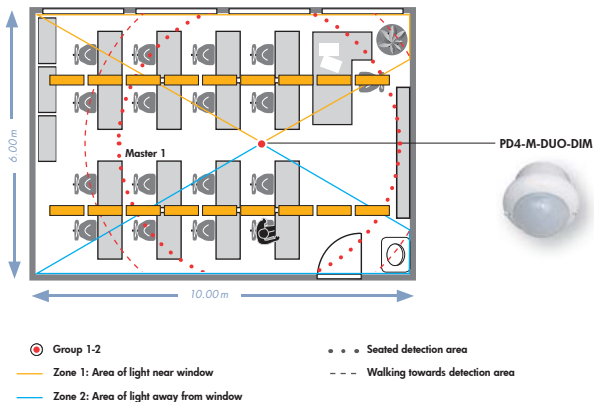

Master/Slave switching with optional push button operation.
The Master device must always be mounted at the point with the least proportion of daylight.

Hinweis:

The ideal monitoring is also possible with a single PD4-DUO occupancy detector.

Description	Colour	Page	Part number

PD2-S-FM	white	96	92156

APPLICATION EXAMPLE 21: CLASS ROOM WITH PD4-M-DUO-DIM

■ Application description:

In a classroom, the lighting is to be separately controlled depending on presence and daylight in a perimeter near windows and a light perimeter away from the windows.

Despite the automatic control, it should be made possible to manually influence the switching condition via push buttons or remote control. The occupancy detector is to be mounted on the ceiling.

■ Building information:

Type: classroom with daylight
Dimensions: L 10.00 x W 6.00m
Room height: 2.70 m (in light)

■ Illumination:

Two lighting groups with electronic ballast

■ Products shown:

1 each LUXOMAT® PD4-DUO or
1 each LUXOMAT® PD4-DUO-DIM

■ Device settings:

Follow-up time R1: > 5 min.
Switch-on threshold R1: 500 Lux or individual using remote control
Follow-up time R2: optional

■ Connected circuit:

Standard operation

APPLICATION EXAMPLE 22: CLASS ROOM WITH PD4-M-DAA4G

- Walking towards the detector
- Walking across the detector's detection area

- Main lighting Zone A via DALI groups 1-3
- Blackboard lighting Zone B via DALI group 4
- Relay channel (air conditioning)

■ Application description:

In a classroom, the lighting shall be controlled depending on brightness and daylight in three DALI groups (a window-side lighting group, a middle lighting group, and a wall-side lighting group).

Additionally, a fourth DALI group shall be switched as lectern and blackboard lighting. Furthermore, the air ventilation shall be switched via a relays channel. Despite of the automatic lighting control it shall be possible to change the actual switching condition via push-button or remote control app. The occupancy detector shall be ceiling-mounted.

■ Building information:

Type: classroom with daylight
Dimensions: L 10,00 x W 6,00m
Room height: 2,70 m (in light)

■ Illumination and HVAC:

4 DALI groups with EB
1 relay channel for HVAC

■ Products shown:

1 LUXOMAT®net PD4-M-DAA4G

■ Device settings:

Follow-up time DALI group 1-4: > 5 min.
Switch-on threshold DA1 - DA4: 500 Lux
Zone A in full automatic mode
Zone B in semi-automatic mode
Follow-up time HVAC: 15 min

■ Connected circuit:

Standard operation

APPLICATION EXAMPLE 23: CLASS ROOM WITH PD4-M-3C-TRIO OR PD4-M-TRIO-DIM

● Group 1-3

— Zone 1: Area of light near window

— Zone 2: Area of light away from window

— Zone 3: Control of board lighting

● ● ● Seated detection area

--- Walking towards detection area

■ Application description:

In a classroom, the lighting is to be separately controlled depending on presence and daylight in a perimeter near windows and a light perimeter away from the windows. The application of a separately switchable board lighting should come along. Despite the automatic control, it should be made possible to manually influence the switching condition via buttons or remote control. The occupancy detector is to be mounted on the ceiling.

■ Building information:

Type: classroom with daylight
Dimensions: L 10.00 x W 6.00m
Room height: 2.70 m (in light)

■ Illumination:

Two lighting groups with electronic ballast
Board lighting

■ Products shown:

1 each LUXOMAT® PD4-TRIO or
1 each LUXOMAT® PD4-TRIO-DIM

■ Device settings:

Follow-up time R1: > 5 min.
Switch-on threshold R1: 500 lux or individual using remote control
Follow-up time R2: optional

■ Connected circuit:

Standard operation

Description	Colour	Page	Part number

APPLICATION EXAMPLE 24: SHOP WITH RC-PLUS NEXT N 230

■ Application description:

In a shop the customer presence has to be indicated by a chime.
The motion detector must be fixed above the entrance door.

■ Building information:

Type: shop with daylight
Room height: 2.70m

■ Products shown:

1 LUXOMAT® RC-plus next N 230

■ Illumination:

In this case the chime only will be activated, no light.

■ Device settings:

Impulse mode
Switch-on threshold: Day mode (light evaluation inactive)
("sun" symbol)

■ Connected circuit:

Pulse mode with chime connected

Description	Colour	Page	Part number
RC-plus next N 230	white	9	93331
RCplus next N 230	brown	9	93334

APPLICATION EXAMPLE 25: HOUSE ENTRANCE WITH RC-PLUS NEXT N 130

B.E.G.

■ **Application description:**
House entrance, wall mounting
The persons approach always on the small access way and must be detected as early as possible.

■ **Building information:**
Type: house entrance with daylight
Mounting height: 2.50 to 3.00m

■ **Illumination:**
One light group

■ **Products shown:**
1 LUXOMAT® RC-plus next N 130

■ **Device settings:**
Follow-up time: 4 min.
Switch-on threshold: dusk in progress (symbol "dark moon")

■ **Connected circuit:**
Standard operation

■ **Hinweis:**
Please ensure that the motion detector installation is always made lateral to the pedestrian and vehicle driving direction. If one walks directly toward the detector, the range is significantly reduced.

Description	Colour	Page	Part number
RC-plus next N 130	white	8	93321
RC-plus next N 130	brown	8	93324
RC-plus next N 130	black	8	93323

● Group 1

--- Walking towards detection area/ across

■ Application description:

An automatic lighting control with wall switches is to be implemented as a presence detector in a housing/ hotel complex corridor. On-off-switching is to be realized manually by means of the presence detector. The wall switches area is to be lit differently in case the light level passes below brightness threshold.

■ Building information:

Type: Living / Hotel floor with different light conditions
Dimensions: L 20.00 x W 2.50 m (up/down stairway)
Room height: 2.70 (in light)

■ Products shown:

4 LUXOMAT® Indoor 140-L

■ Illumination:

One light group

■ Device settings:

Operation mode: semi-automatic mode
Brightness value: Day-time/Night-time operation or individually adjustable brightness value

Follow-up time: 5 min
LED orientation light: 100 % brightness
LED nightlight: 30 % brightness
LED nightlight: permanent on

■ Connected circuit:

Master/ Slave switching. The Master device must always be mounted at the point with the least proportion of daylight. The Master can alternatively be determined later if the installation was realized fully wired.
