

DAB Radio

The new UP radio receives DAB, DAB+ and FM tuner stations. Further, it has a back-side aux input for connecting another sound source, e.g. the Bluetooth receiver BTR 55 MK2.

9 DAB and 9 FM stations can be stored.

The DAB / FM radio UP fits into all switch programs with 55x55mm central plate.

The performance of the integrated stereo amplifier has more than doubled compared to the tried and tested predecessor model - RDS-Radio! Two loudspeakers - or the further improved UP loudspeaker KEL 55 MK 2 can be connected to this.

Operation is easy with just two buttons and a rotary control knob. The menu provides many other functions, e.g. alarm, sleep, display brightness, maximum volume

For operation, e.g. in a hotel, the extended functions may be disabled, e.g. the transmitters and the max. volume can not be adjusted.

The DAB / FM radio can even be controlled via the optional remote control.

The DAB / FM radio UP is delivered with a throwing antenna, which can be pushed into the empty cabling tube. The house antenna can also be connected for the best reception.
